

API Bug Report

Finance Dashboard — Backend Issues | Reported: 19 May 2026

Summary

#	Endpoint	Method	Status	Error
1	/api/v1/admin/budgets	GET	403	Forbidden
2	/api/v1/admin/departments	GET	403	Forbidden
3	/api/v1/finance/reports/export ?report_type=overview	GET	404	Not Found

Issues #1 & #2 — 403 Forbidden

403 Forbidden — Finance role cannot access `/admin/*` endpoints. These endpoints require `super_admin` role.

Affected Endpoints:

GET `https://procura-backend.susanoox.in/api/v1/admin/budgets`

GET `https://procura-backend.susanoox.in/api/v1/admin/departments`

Root Cause:

The Finance Dashboard is calling `/admin/` endpoints which are restricted to `super_admin` role only. The `finance` role does not have permission to access these admin-level routes.

Fix Required (Backend):

Option A	Create dedicated Finance endpoints: GET <code>/api/v1/finance/budgets</code> GET <code>/api/v1/finance/departments</code> with <code>finance</code> role permission.
Option B	Add <code>finance</code> role to the allow list on existing admin endpoints: roles: <code>[super_admin, finance]</code> for <code>/admin/budgets</code> and <code>/admin/departments</code> .

Issue #3 — 404 Not Found

404 Not Found — The export endpoint does not exist on the backend. Route `/finance/reports/export` is not implemented yet.

Affected Endpoint:

```
GET https://procura-backend.susanoox.in/api/v1/finance/reports/export?report_type=overview
```

Root Cause:

The **/finance/reports/export** route has not been implemented on the backend. Frontend is calling this endpoint for the Reports Export feature but the server returns 404.

Fix Required (Backend):

Implement the export endpoint:

```
GET /api/v1/finance/reports/export?report_type=overview
```

- Auth: Bearer token, role: **finance** or **super_admin**
- Query param: report_type → overview | detailed | summary
- Response: File download (PDF or CSV) or JSON data
- Return Content-Disposition: attachment header for file downloads

Frontend Note

No frontend changes needed for Issues #1 & #2 — the API calls are correct. Once backend fixes the permissions or adds finance-specific endpoints, the Finance Dashboard will work automatically. For Issue #3, frontend already has the UI wired up — only the backend endpoint is missing.
